December 7, 2001, Boston, MA. **RLM Software**, developer of *FlightView* flight tracking software and *Professional Flight Management (PFM)* developer of *PFM Windows*, Scheduling/Dispatching System have integrated their technologies to create a dispatching system that features real time flight tracking.

*PFM* will incorporate *RLM's FlightView* real time data into its Scheduling/dispatching system. *FlightView* is a popular, radar-based flight tracking system that has been on the market for almost ten years. Offering highly accurate, up-to-the-minute data on IFR flights in the United States and Canada, the system is used by corporate flight departments, charter operators, fractionals, cargo airlines, regional airlines and FBOs to monitor the location and estimated arrival times of anticipated flights.

Until now, companies that wanted dispatch/scheduling software and flight tracking had to purchase a dispatch/scheduling product from one vendor, a flight data product from another vendor. As a result of this recent agreement, these companies can now purchase a complete, integrated dispatch/scheduling and flight data solution from a single vendor.

"Companies employ scheduling/dispatching software to help them manage their operations and make decisions and flight tracking has an enormous impact on those decisions," says Bill Figures, *PFM Systems*. "Teaming up with *FlightView* has enabled us to enhance *PFM Windows* with an exceptional and affordable flight tracking product. Now, PFM users can view *live* flight data graphically on their PC."

*RLM's FlightView* provides continuous, real-time, nationwide access to IFR flight radar data.

"*RLM Software* is extremely pleased to be working with *PFM* on such an exciting project," says Brian O'Donnell *RLM's* Director of Business Development. "We feel that the aviation community will benefit greatly from this technology, as it provides users with greater decision making capabilities."

### About RLM Software

Founded in 1981, *RLM Software* is the leading provider of real-time flight tracking products for airlines, corporate aviation and the travel industry. *RLM Software's FlightView* technology is used by travel web sites such as Travelocity and has been operational on the Internet for over eight years. For aviation customers, *FlightView* provides additional services including an interface to the Federal Aviation Administration's Collaborative Decision Making (CDM) system.

The *FlightView* data is available immediately to *PFM* customers. For more information on *FlightView* or *RLM Software*, call (617) 787-4200 or email [sales@rlmssoftware.com](mailto:sales@rlmssoftware.com). For more information on *PFM* call 610-668-1655 or email [support@pfmsys.com](mailto:support@pfmsys.com).
